- \* **ALWAYS** keep the gun unloaded until ready to use.

## Fundamentals

1. Aiming
2. Breath Control
3. Hold Control
4. Trigger Control
5. Follow Through

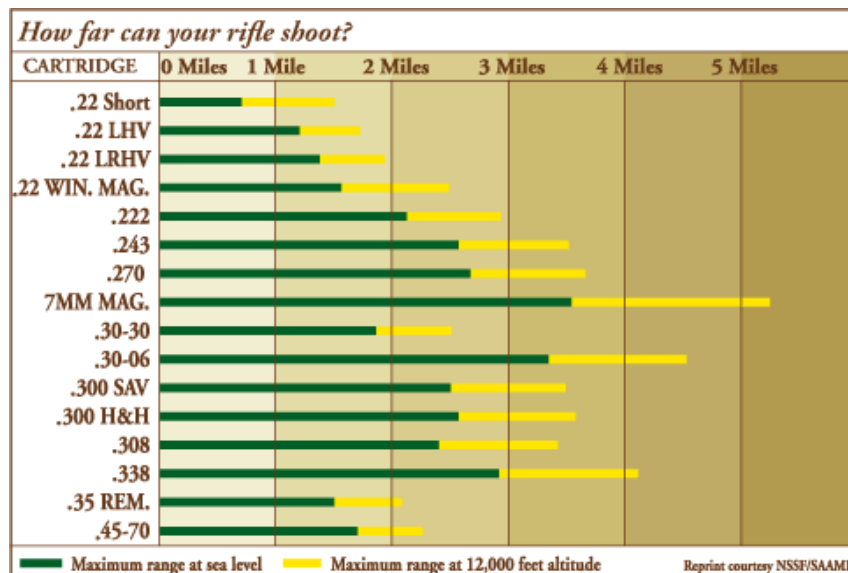

## Gun parts

## Malfunctions

1. Misfire: A total failure of the shotshell to fire after the primer had been struck by the firing pin. When the trigger is pulled and nothing happens, keep the shotgun pointed in a safe direction for at least 30 seconds before opening the action.
2. Hangfire: A perceptible delay in the ignition of a shotshell after the firing pin strikes the primer. By keeping the gun pointed in a safe direction, no one will be harmed and no property damaged by the delayed ignition.
3. Squib load: The development of less than normal pressure or velocity after the ignition of the shotshell. If anything unusual is noticed when a shot is fired, such as a difference in recoil or noise, stop firing immediately. The wad may still be in the barrel. Firing another shot in an obstructed barrel could cause serious injury or damage.
